

ZIMCOM'S DATA PROTECTION IS BETTER THAN THE BIG PLAYERS AND COSTS LESS: SEE HOW

Zimcom's Automatic Data Protection

50
COPIES

This all equates to 50 copies of your data stored in our cloud. Other providers charge extra for this and require you to set it up yourself

DR snapshots replicated to secondary region every 4 hours and retained for 3 days

Backups are immutable and protected from ransomware, infection and human error

Nightly snapshot backups of your server are taken automatically and retained in-region for 30 days

Configuring this level of data protection with the BIG 3 could cost you hundreds if not thousands of more dollars per month

We give you more. Zimcom is the Gold Standard for Data Protection

Other providers don't include any backup at all. We include 30 days plus out-of-region DR

Why is Data Protection Important?

Data security ensures that organizations can continue to operate effectively – even in the face of data breaches or other incidents. It also builds a foundation of trust between an organization and its customers that can last for years.

The Big 3 Public Cloud Providers

We help organizations leverage cloud technology...and we do it for 30-50% less than the “Big 3” public cloud providers.

The Big 3 don't include the level of data protection that most businesses need, and in order to get it, you have to pay extra for it and set it up yourself.

Zimcom includes more

Customer support • Infrastructure flexibility • Network flexibility • Cost savings • Migration assistance

We have some powerful tools in our data protection toolkit, including:

Compliance best practices

Through disciplined controls and audit assessment processes, we have implemented comprehensive practices to help our customers meet various regulatory compliance requirements.

Encryption

All production storage data is encrypted using FIPS 140-2 certified AES256 encryption.

Endpoint detection and response

Stop breaches before they happen and protect your network from even the most sophisticated attacks with our managed cloud security offering.

Multifactor authentication

Multifactor authentication is used throughout our cloud infrastructure management platform as a best practice. We also offer MFA to help protect your cloud and on-premise environment to protect against unauthorized access.

Ransomware protection

Air-gapped and immutable backups are used to ensure your data is safe from ransomware and file encryption tactics.

Web application firewall

Our enhanced site protection keeps your site safe from malicious threats and improves performance.

DDoS Protection

Cloud-based monitoring and mitigation service to thwart DDoS attacks.

Benefits of Data Protection

Cost savings

Data breaches and cyberattacks are expensive – so costly, that many organizations don't survive them. Data protection can eliminate the costs associated with data breaches, including the cost of investigating and rectifying the breach.

Reputational value

By implementing data protection measures, organizations can help to safeguard their data and protect their reputation.

Improved efficiency

By ensuring that their data is secure, organizations can focus on their core activities and objectives without worrying about the potential for data loss.

Keeping organizations compliant

Data protection can help to ensure compliance with regulations, such as the General Data Protection Regulation (GDPR). By meeting these regulatory requirements, organizations can avoid costly fines.

Native data protection is:

- Air-gapped
- Immutable
- Encrypted
- Multi-Region

Bonus: Our backup data protection is easy to recover and also exceeds the golden '3-2-1 Backup Rule'.

providing industry-leading data protection

At Zimcom, our business relationships are built on trust.

Technology that takes your organization to the next level
Responsive and accountable experts when you need them
Understanding your situation and providing real solutions
Security that you and your organization deserve
Trustworthy partnerships based on respect and personal attention

Ready to experience the trust and the peace of mind that comes with robust data protection?
